TASK 6) LAMBDA END TO END CAPSTONE PROJECT 1

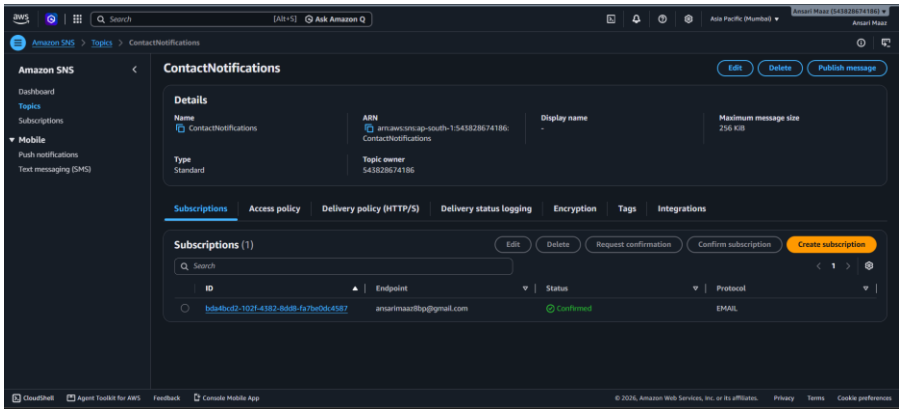

>create IAM role with use case of lambda

>create policy in json format and attach to the role

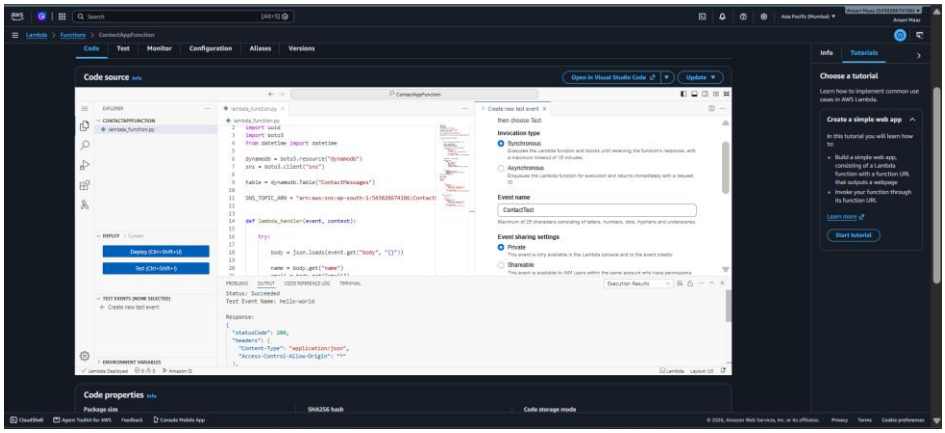

>than create dynamoDB (name===ContactMessages) , partiction key is (id)

>create sns topic(name===ContactNotificatios), and add subscription than verify email

>create lambda(name==ContactAppFunction) and add our role than create

>add python code in editor

>deploy

>test [```json

{

"statusCode": 200,

"body": "{\"message\": \"Message submitted successfully\"}"

}

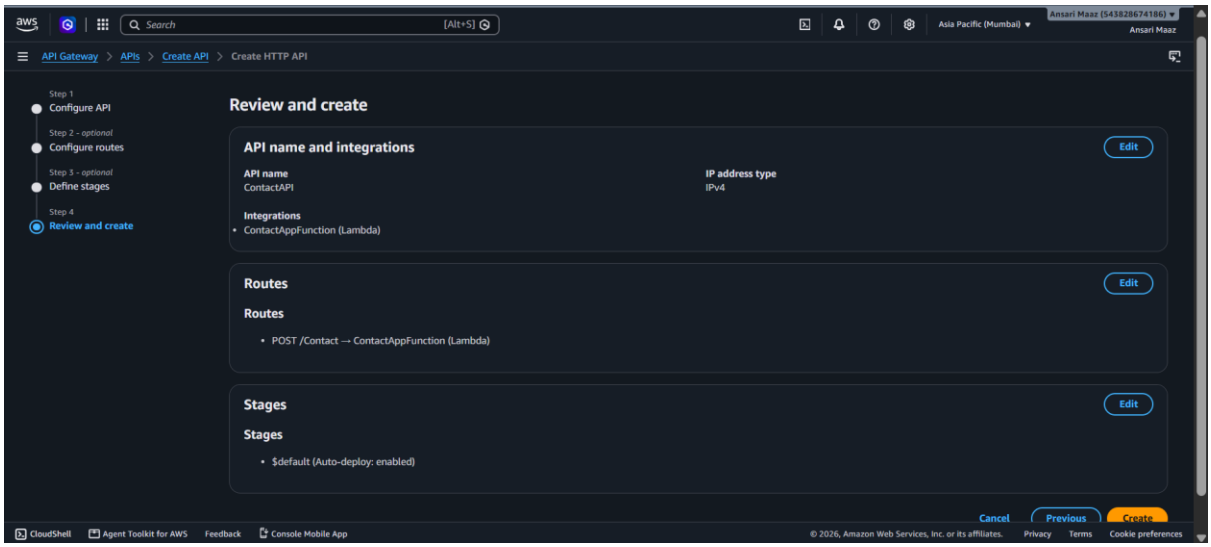

```]

>1 table item will we updated in the dynamoDB

>CHECK SNS in your gmail

>api service> http api > build> choose===ContactAppFunction > name==ContactAPI

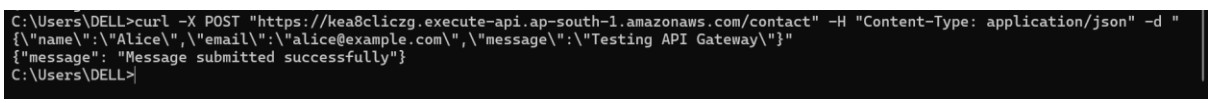

>add rout > POST / contact  > select == ContactAppFunction > create

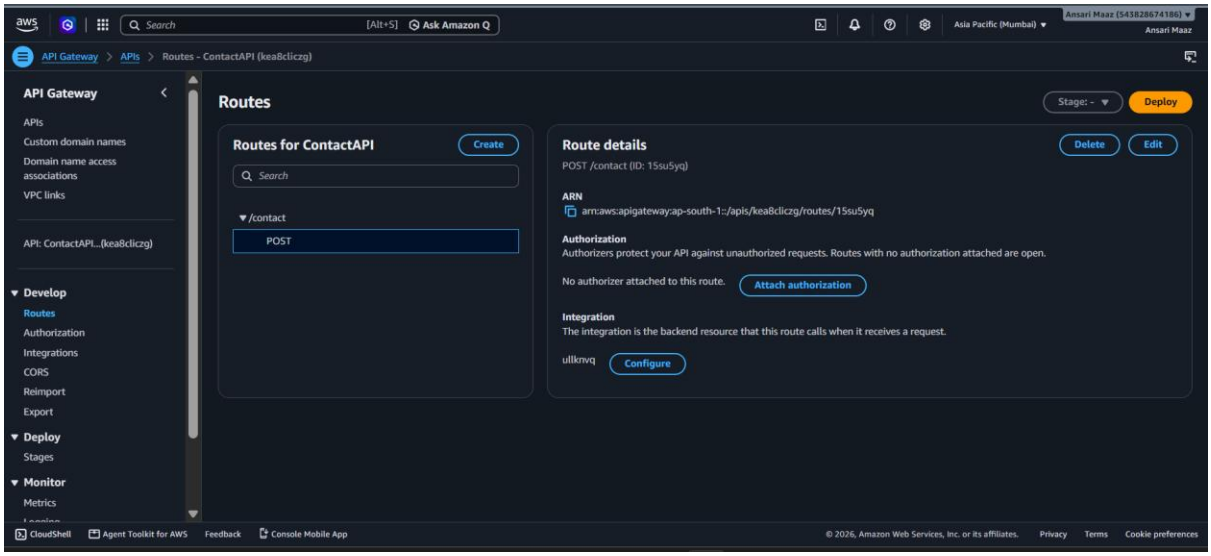

Inoked url : https://kea8cliczg.execute-api.ap-south-1.amazonaws.com

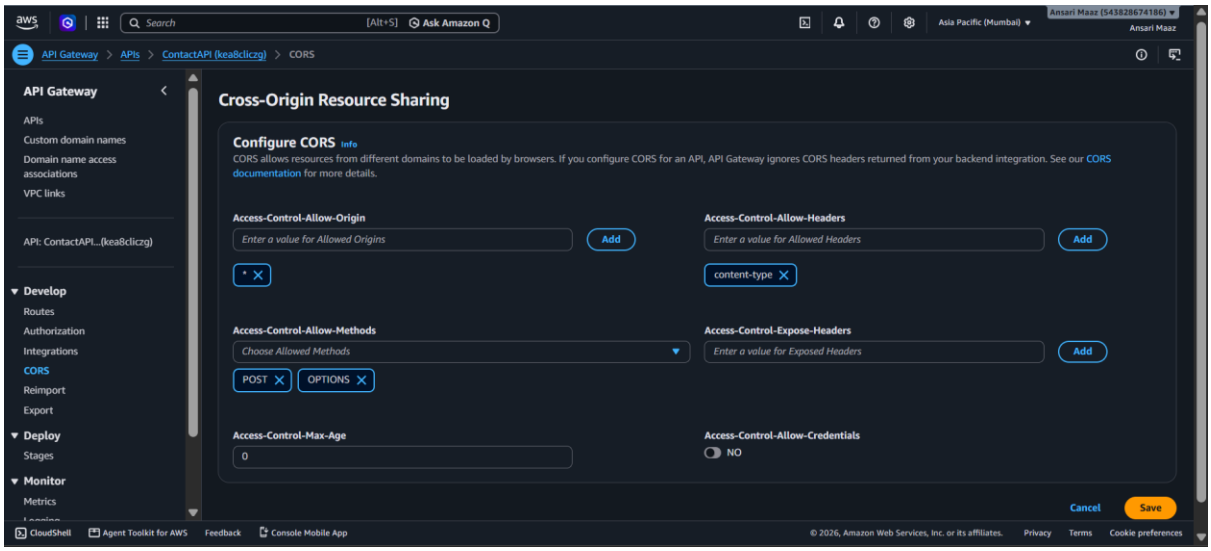

>test api gateway

curl -X POST "https://kea8cliczg.execute-api.ap-south-1.amazonaws.com/contact" -H "Content-Type: application/json" -d "{\"name\":\"Alice\",\"email\":\"alice@example.com\",\"message\":\"Testing API Gateway\"}"

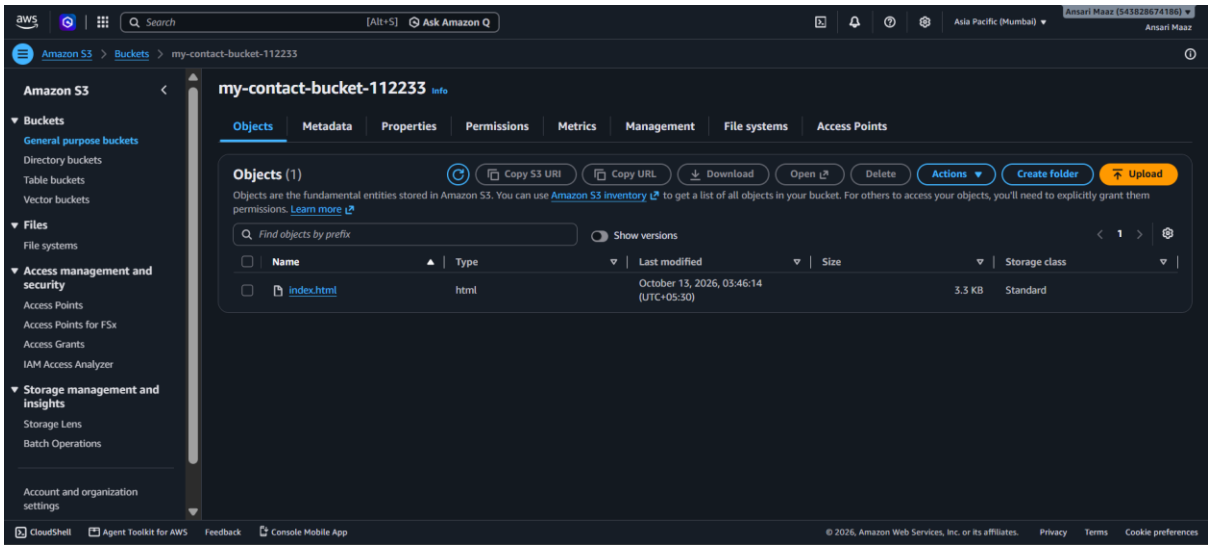

```

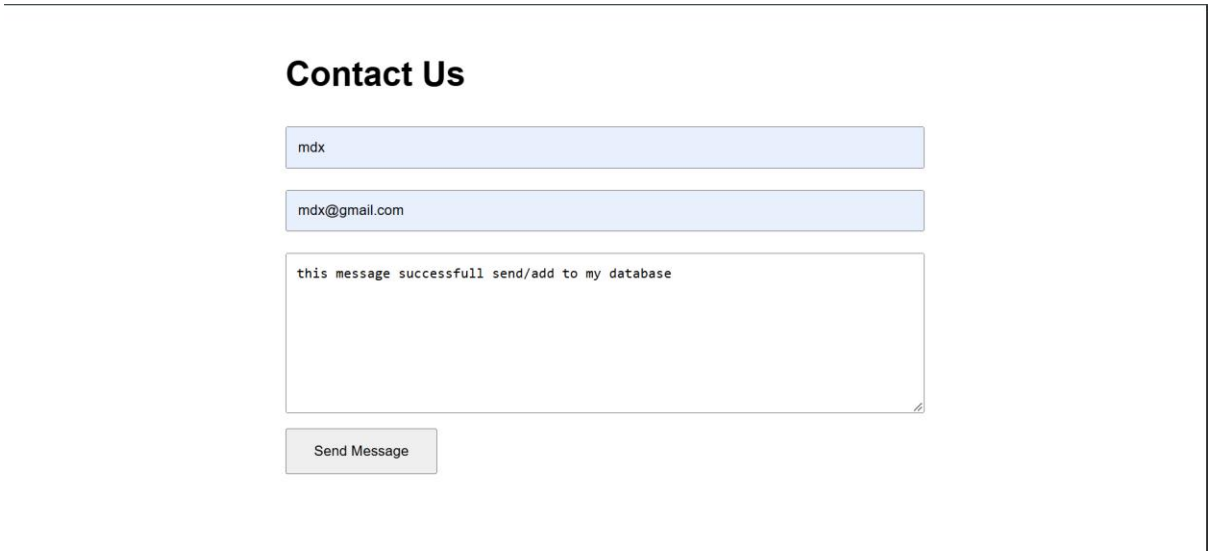

>set corn to….>

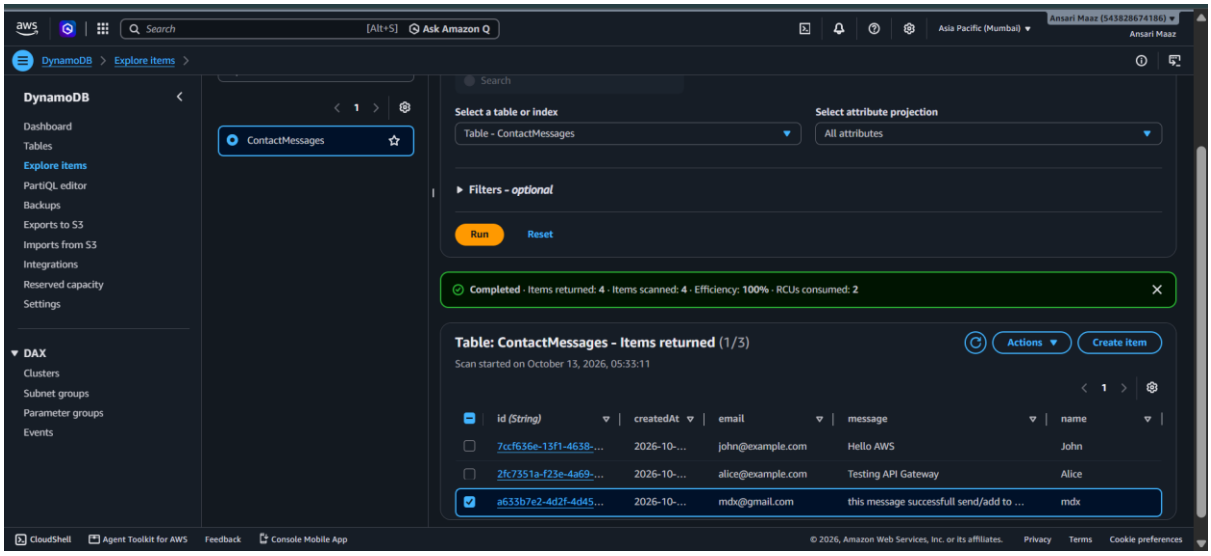

>create bucket> upload index.html > edit bucket policy > enble static website hosting

>past url and check

>successfully working

>SNS is also working successful
